

## Performance Chips

FAST™ performance computer chips provide power seekers with a superior engine tuning method. FAST™ performance chips target air/fuel ratio, ignition timing curve and transmission shifting points to unlock power from your stock engine. Fully dyno and road tested, these performance computer chips are unsurpassed in power and reliability.

Each application offers a potential 10 percent horsepower and torque increase without a sacrifice in fuel mileage. By adjusting transmission shift points and delaying the torque converter lock-up, the chips allow better usage of the engine's torque curve for better overall performance and vehicle drivability. Best of all, in as little as 15 minutes, you can realize improved performance from your stock engine. There are no other methods for horsepower and torque gains as simple and affordable as the addition of a FAST™ performance chip. Every chip comes with a complete step-by-step installation guide and support technicians are just a phone call away when any assistance is required.
